

Application User & Reference Guide

PawPurse Triage is a mobile-first web application designed to help pet owners evaluate the urgency of symptoms in crisis. This document provides a visual walkthrough of the triage stages, multi-lingual support, and emergency clinic finder features with actual application screenshots.

1. Triage Urgency Stages

RED: Extreme Urgency - Life-Threatening Crisis

The pet requires immediate emergency veterinary intervention. The background transitions to a pulsing alert red. Clear guidance details slide up to instruct the owner on immediate action.
Example input: "My dog is bleeding heavily and choking on a bone."

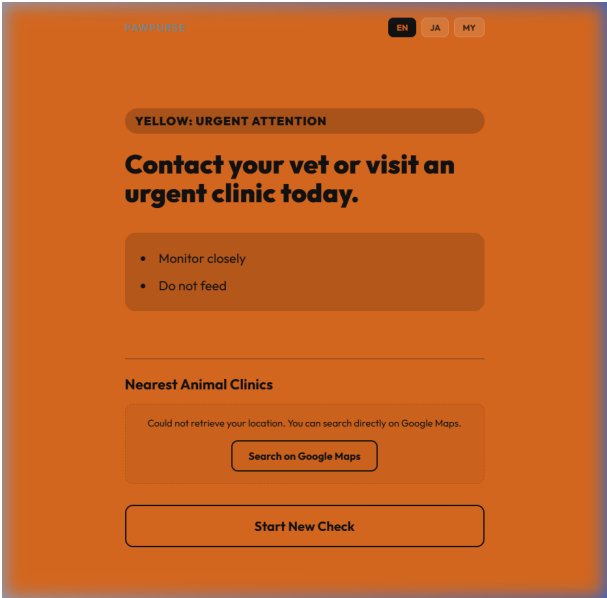

PawPurse Triage App

Visual Guide: Urgency Triage & Emergency Clinic Locator

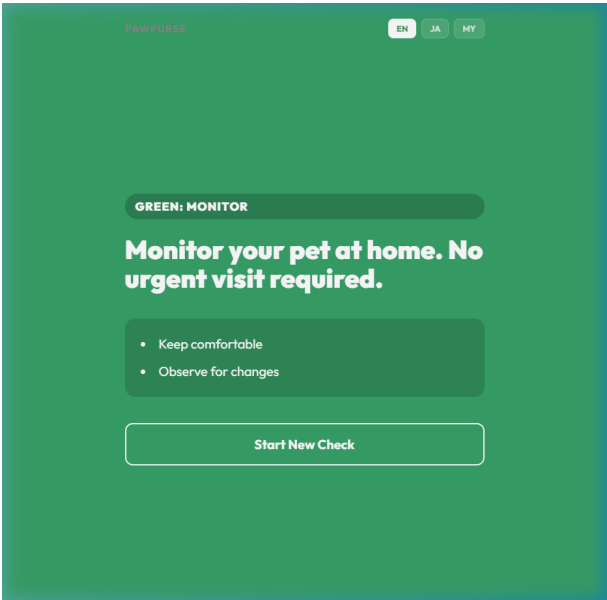

YELLOW: Urgent Attention - Vet Visit Required

The symptoms indicate a significant medical issue that needs to be addressed today. The background turns warm amber/yellow, instructing the owner to contact their vet or visit an urgent clinic today.
Example input: "My dog is vomiting and has diarrhea."

GREEN: Monitor - Non-Urgent

The symptoms are evaluated as non-urgent. The background transitions to a calm forest green. The owner is advised to monitor the pet at home and look for changes.
Example input: "My cat is sleeping more than usual today."

2. Language Localization & Auto-Detection

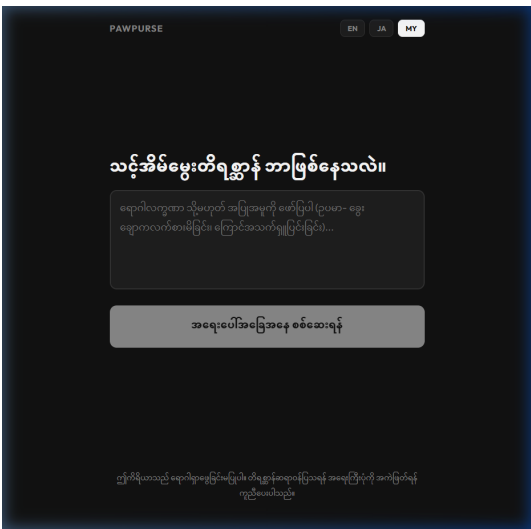

PawPurse fully supports English (EN), Japanese (JA), and Burmese (MY) to ensure high accessibility during emergencies. The user interface strings, buttons, and headers are fully translated.

Additionally, the backend automatically detects the CJK or Burmese unicode character ranges when a user inputs symptoms, enforcing that the Gemini response matches the user's input language.

3. Nearest Emergency Clinics Locator

For RED and YELLOW urgency states, the app prompts the user to share their location. Once location access is granted, it queries the OpenStreetMap Overpass API for veterinarians within 15 km.

Enhancement Features:

- Doctor name on duty: Displays the doctor's name or 'Duty Veterinarian' fallback.
- Google Maps integration: The address text is a direct link to Google Maps navigation directions.
- One-tap emergency call: The phone icon triggers a direct phone call to the clinic's contact number.
